Labelling Scheme

The coding of variable labels follows a uniform scheme. The first two digits denote the wave. For example, for all variables gathered in the first wave, every variable starts with the two identical digits `w1_*`, accordingly with `w6_*` for the sixth wave.

The subsequent digits indicate the number of the question, equivalent to its position in the questionnaire. For example, `w6_q13` denotes Question 13 of Wave 6 questionnaire. Similar labelling applies to treatment variables or metadata variables. For example, `w6_lang` refers to the language of Wave 6 questionnaire, while `w6_treat1` defines the first of several treatments applied in Wave 6. When the order of questions was randomized for respondents, this is mentioned explicitly.

The last few digits determine the position of an item or answer option in case of an item battery or multiple-answer question. For example, questions might allow multiple answers coded as binary variables for the respective answer choice. Likewise, many matrix questions comprise several items. For example, `w6_q13x3` would denote Item 3 from Question 13 in Wave 6. When the order of items was randomized for respondents, this is mentioned explicitly.

Missing Code Scheme

If applicable, missing values are coded as follows:

-33	Unit nonresponse
-44	Missing by m.o.p.
-55	Missing by technical error
-66	Missing by design
-77	Not reached
-88	Missing by filter
-97	Invalid answer in survey (e.g. ambiguous)
-99	Item nonresponse

Presentation of randomisation

This wave included survey experiments. Randomly defined groups received different treatments in the form of information and question texts. The treatment variables display the exact information and question texts for each group. If the treatment concerns the question text of a variable, the different versions will be presented along with the corresponding variable. For the treatment variables, *Intro Text* shows which question variable(s) the treatment refers to. If all items of a question are affected by the treatment, this will be represented by a placeholder for corresponding items, i.e. `w6_q13x...` affects all items of Question 13. The following scheme is used to present the different treatments:

- `{...}` indicates all treatment values belonging to one treatment variable,
- `[...]` indicates one treatment value within a treatment variable,
- `//` delimits the different treatment values and can be interpreted as an exclusive OR.

The control group often receives no information or a shortened question text (without additional information). The absence of information or text is indicated with an empty field. Control group information are either recorded by a general treatment group variable or a specific treatment variable referring to the information/text. In the latter case, `[ ]` refers to the (empty) control group value. Otherwise, `{ }` indicates the (empty) control group value.

Question Types

The given question types explain the way respondents were allowed to answer a specific question. This is, either selecting a limited (single choice) or open (multiple choice) number of response options from a given list, inserting text or numeric values in open text boxes, or showing one's opinion via rating on a predefined continuum. Two (question) types do not result from respondents' answers. Treatments were predefined and metadata record basic information on individual survey rounds and respondents.

Personal Details

Question 1: Year of birth

w6_q1

Variable name	w6_q1
Variable label	age
Dataset	upanel_w6
Item source	Umweltpanel Welle 6
Question type	Open Text Box (numeric)

-66	Missing by design
-77	Not reached
-88	Missing by filter
-97	Invalid answer in survey (e.g. ambiguous)
-99	Item nonresponse

Health

Question 17: General life satisfaction

w6_q17

Variable name	w6_q17
Variable label	life_gen
Dataset	upanel_w6
Item source	Umweltpanel Welle 6
Question type	Single Choice
Intro text	In diesem Abschnitt interessieren wir uns für den Zusammenhang von Umwelt und Gesundheit. Sollten Sie bestimmte Fragen zu Ihrer Gesundheit nicht beantworten wollen, haben Sie immer die Möglichkeit, keine Angabe zu machen und die Frage zu überspringen. Jedoch sind Ihre Antworten für unsere Forschung sehr wertvoll. Wir bitten Sie deshalb darum, möglichst alle Fragen zu beantworten.
Intro text (EN)	In this section we are interested in the link between the environment and health. If you do not want to answer certain questions about your health, you always have the option of not providing any information and skipping the question. However, your answers are very valuable for our research. We therefore ask you to answer as many questions as possible.
Instruction	
Instruction (EN)	
Question Text	Ganz allgemein gefragt: Wie zufrieden sind Sie mit Ihrem Leben?
Question Text (EN)	How satisfied are you in general with your current life?
Item Text	
Item Text (EN)	

Value Labels

1	Gar nicht zufrieden
2	Eher nicht zufrieden
3	Teils, teils
4	Eher zufrieden
5	Vollumfänglich zufrieden

Value Labels (EN)

1 (EN)	Not at all satisfied
2 (EN)	Rather not satisfied
3 (EN)	Neither satisfied nor unsatisfied
4 (EN)	Rather satisfied
5 (EN)	Completely satisfied

Missing Labels

-22	Not in panel
-33	Unit nonresponse
-44	Missing by m.o.p.
-55	Missing by technical error
-66	Missing by design
-77	Not reached
-88	Missing by filter

-97	Invalid answer in survey (e.g. ambiguous)
-99	Item nonresponse

Question 18: General state of health

Question type	Single Choice
Intro text	In diesem Abschnitt interessieren wir uns für den Zusammenhang von Umwelt und Gesundheit. Sollten Sie bestimmte Fragen zu Ihrer Gesundheit nicht beantworten wollen, haben Sie immer die Möglichkeit, keine Angabe zu machen und die Frage zu überspringen. Jedoch sind Ihre Antworten für unsere Forschung sehr wertvoll. Wir bitten Sie deshalb darum, möglichst alle Fragen zu beantworten.
Intro text (EN)	In this section we are interested in the link between the environment and health. If you do not want to answer certain questions about your health, you always have the option of not providing any information and skipping the question. However, your answers are very valuable for our research. We therefore ask you to answer as many questions as possible.

The w6_q20 items ask for positive and negative aspects of mental health and are part of a research instrument assessing non-psychotic psychiatric disorders (GHQ-12). It assesses general distressing phenomena in the previous weeks. A person's score is calculated as an additive index, either by applying Likert-Scoring (0-1-2-3) or the Goldberg-Method (0-0-1-1). Higher values indicate higher levels of mental distress.

The w6_q20 items ask for positive and negative aspects of mental health and are part of a research instrument assessing non-psychotic psychiatric disorders (GHQ-12). It assesses general distressing phenomena in the previous weeks. A person's score is calculated as an additive index, either by applying Likert-Scoring (0-1-2-3) or the Goldberg-Method (0-0-1-1). Higher values indicate higher levels of mental distress.

Question 31: Drinking Water Initiative

w6_q31

Variable name	w6_q31
Variable label	water7
Dataset	upanel_w6
Item source	Umweltpanel Welle 6
Question type	Single Choice
Intro text	Die sogenannte «Trinkwasser-Initiative» wird voraussichtlich 2021 zur Abstimmung kommen. Ihr Ziel ist laut eigenen Angaben die Versorgung der Gesellschaft mit sauberem Trinkwasser und gesunder Nahrung. Die Kernforderungen der Initiative sind dabei, dass nur noch diejenigen landwirtschaftlichen Betriebe mit Subventionen und Direktzahlungen unterstützt werden, die keine Pestizide einsetzen; keine prophylaktischen Antibiotika in der Tierhaltung einsetzen; ihre Tiere allein mit eigens produziertem Futter ernähren.
Intro text (EN)	The so-called "Drinking Water Initiative" is expected to be voted on in 2021. According to the initiative, its goal is to provide society with clean drinking water and healthy food. The core demands of the initiative are that only those agricultural enterprises will be supported with subsidies and direct payments that do not use pesticides; do not use prophylactic antibiotics in livestock; feed their livestock alone with self-produced food.

-99	Item nonresponse

The respondents were divided into two groups for the survey. Both groups answered Question 1 to Question 20 as well as Question 48, 49 and 50. Only one group, focussing on *Environmental justice*, answered Questions 21 to 36. Only respondents in the other group, focussing on *Covid-19*, answered Questions 37 to 47.

A set of three items is randomly assigned to each respondent. The first treatment item defines the first question item for [Question 46](#), i.e. w6_q46x3, and the first attribute of each conjoint profile of [Question 47](#).

Conjoint treatments - photovoltaics

The three items of [Question 36](#) were part of a conjoint experiment. Treatment variables beginning with “w6_pv_conjoint” define the values of each attribute. The labels of the conjoint treatment variables follow a uniform pattern as follows:

The first digit indicates the attribute dimension. Each presented policy profile has two attributes. Attribute 1: A lot or little participation?

Attribute 2: Financial benefits for residents?

- w6_pv_conjoint_attr1 = Participation attribute

The letter indicates the conjoint round. In three rounds, respondents compared two different policy profiles respectively.

- w6_pv_conjoint_attr1c = Participation attribute in third round

The second digit indicates one of two policy profiles in each round.

- w6_pv_conjoint_attr1c2 = Value of participation attribute for second profile in third round

Conjoint treatments - Political candidates

The four items of [Question 47](#) were part of a conjoint experiment. Treatment variables beginning with “w6_conjoint” define the values of each attribute. For this experiment, three of 16 attributes were randomly assigned to each respondent (see [w6_treat3](#)). The labels of the conjoint treatment variables follow a uniform pattern as follows:

The first digit refers to the attribute. Each candidate profile has three attributes.

- w6_conjoint_attr1 = First randomly assigned attribute

The letter indicates the conjoint round. In four rounds, respondents compared two different candidate profiles respectively.

- w6_conjoint_attr1d = First randomly assigned attribute in fourth round

The second digit indicates one of two candidate profiles in each round.

- w6_conjoint_attr1d2 = Value of first randomly assigned attribute for second profile in fourth round

-99	Item nonresponse

The variable indicates the extent to which information on the respondents' gender and year of birth is identical to data of the persons originally in the random sample. The "divergent" value represents a deviation of the sex or year of birth by more than +/- 1 year from the data in the population register of the Federal Statistical Office (BFS/SRPH).

Weighting
